Audio Amplifier With DC Volume Control

The TDA7052B and TDA7052BT are 0.5 W and 1 W mono Bridge-Tied Load (BTL) output amplifiers with DC volume control. Not only have been designed. Bass Treble Tone Control The LM1036 is a DC controlled tone (bass/treble), volume.

The aim of the project was to make a stereo audio amplifier. In addition to this additional function, the circuit is designed as an active stereo-tone/volume control for car radios. All these functions can be controlled by d.c. voltages or by single linear.

Audio Projects Sometimes you may need to look for projects or circuits, but you don't have an idea. Please see the tone control with bass/middle/treble with IC LM4558. I want to create a DC connection. I will help you.

This article describes the Audio Amplifier with DC Volume Control (TDA7052B). The principle is very simple, very practical. The circuit components can help you.
